09/05/2007	PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

PTOL-90A (Rev. 04/07)

		Application No.	Applicant(s)
Office Action Summary		09/903,075	GULER ET AL.
		Examiner	**Art Unit**	
		Sara Chandler	3693	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE _3_ MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

1) ☒ Responsive to communication(s) filed on _10 July 2001_.

2a) ☐ This action is **FINAL.** 2b) ☒ This action is non-final.

3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

4) ☒ Claim(s) _1-24_ is/are pending in the application.

    4a) Of the above claim(s) _____ is/are withdrawn from consideration.

5) ☐ Claim(s) _____ is/are allowed.

6) ☒ Claim(s) _1-24_ is/are rejected.

7) ☐ Claim(s) _____ is/are objected to.

8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

9) ☐ The specification is objected to by the Examiner.

10) ☐ The drawing(s) filed on _____ is/are: a)☐ accepted or b)☐ objected to by the Examiner.

    Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).

    Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).

11) ☒ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

    a)☐ All b)☐ Some * c)☐ None of:

      1. ☐ Certified copies of the priority documents have been received.

      2. ☐ Certified copies of the priority documents have been received in Application No. _____.

      3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

    * See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

1) ☒ Notice of References Cited (PTO-892)

2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)

3) ☐ Information Disclosure Statement(s) (PTO/SB/08) Paper No(s)/Mail Date _____.

4) ☐ Interview Summary (PTO-413) Paper No(s)/Mail Date. _____.

5) ☐ Notice of Informal Patent Application

6) ☐ Other: _____.

U.S. Patent and Trademark Office

PTOL-326 (Rev. 08-06)   Office Action Summary   Part of Paper No./Mail Date 080107

DETAILED ACTION

### *Response to Amendment*

In view of the appeal brief filed on 06/04/07, PROSECUTION IS HEREBY

REOPENED. New grounds of rejection are set forth below.

To avoid abandonment of the application, appellant must exercise one of the

following two options:

(1) file a reply under 37 CFR 1.111 (if this Office action is non-final) or a reply

under 37 CFR 1.113 (if this Office action is final); or,

(2) initiate a new appeal by filing a notice of appeal under 37 CFR 41.31 followed

by an appeal brief under 37 CFR 41.37. The previously paid notice of appeal fee and

appeal brief fee can be applied to the new appeal. If, however, the appeal fees set forth

in 37 CFR 41.20 have been increased since they were previously paid, then appellant

must pay the difference between the increased fees and the amount previously paid.

A Supervisory Patent Examiner (SPE) has approved of reopening prosecution by

signing below:

James Kramer.

8-30-07

This Office Action is responsive to Applicant's Appeal and request for

reconsideration of application 09/903,075 (07/10/01) filed on 06/04/02.

Claim Interpretation

1. In determining patentability of an invention over the prior art, all claim limitations

have been considered and interpreted as broadly as their terms reasonably allow.   See

MPEP § 2111.

> Although the claims are interpreted in light of the specification, limitations from
> the specification are not read into the claims. See *In re Van Geuns*, 988
> F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).

> Applicant always has the opportunity to amend the claims during prosecution,
> and broad interpretation by the examiner reduces the possibility that the claim,
> once issued, will be interpreted more broadly than is justified. *In re Pruter*, 415
> F.2d 1393, 1404-05, 162 USPQ 541, 550-51 (CCPA 1969). See MPEP § 2111.

2. All claim limitations have been considered. Additionally, all words in the claims have

been considered in judging the patentability of the claims against the prior art. See

MPEP 2106 II C. The following language is interpreted as not further limiting the scope

of the claimed invention. See MPEP 2106 II C.

Language in a method claim that states only the intended use or intended result

(e.g., "*for _____*"), but the expression does not result in a manipulative

difference in the steps of the claim. Language in a system claim that states only the

intended use or intended result (e.g., "*for _____*"), but does not result in a

structural difference between the claimed invention and the prior art. In other words, if

the prior art structure is capable of performing the intended use, then it meets the claim.

Claim limitations that contain statement(s) such as "*if, may, might, can could*", as

optional language. As matter of linguistic precision, optional claim elements do not

narrow claim limitations, since they can always be omitted.

Claim limitations that contain statement(s) such as *"wherein, whereby"*, that fail to

further define the steps or acts to be performed in method claims or the discrete

physical structure required of system claims.

USPTO personnel should begin claim analysis by identifying and evaluating each

claim limitation. For processes, the claim limitations will define steps or acts to be

performed. For products, the claim limitations will define discrete physical structures or

materials. Product claims are claims that are directed to either machines, manufactures

or compositions of matter. See MPEP § 2106 II C.

> The subject matter of a properly construed claim is defined by the terms that limit
> its scope. It is this subject matter that must be examined. As a general matter,
> the grammar and intended meaning of terms used in a claim will dictate whether
> the language limits the claim scope. Language that <u>suggests or makes optional</u>
> but does not require steps to be performed or does not limit a claim to a
> particular structure does not limit the scope of a claim or claim limitation. The
> following are examples of language that may raise a question as to the limiting
> effect of the language in a claim:
>
> (A) statements of intended use or field of use,
> (B) "adapted to" or "adapted for" clauses,
> (C) "wherein" clauses, or
> (D) "whereby" clauses.

See MPEP § 2106 II C.

3. Independent claims are examined together, since they are not patentable distinct. If

applicant expressly states on the record that two or more independent and distinct

inventions are claimed in a single application, the Examiner may require the applicant to

elect an invention to which the claims will be restricted.

Oath/Declaration

The oath or declaration is defective. A new oath or declaration in compliance

with 37 CFR 1.67(a) identifying this application by application number and filing date is

required. See MPEP §§ 602.01 and 602.02.

The oath or declaration is defective because:

It does not identify the citizenship of each inventor. Joint inventor Tongwei Liu
failed to include citizenship.

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1, 9 and 17 are rejected under 35 U.S.C 101 because the invention fails

to provide a useful, concrete and tangible result. The evaluating step is unclear

because it is uncertain how the evaluation occurs (i.e., evaluating mean, variance etc.)

and how one would use that information to determine a result. See also discussion

under 112, second paragraph.

Claims 9 and 17 are rejected under 35 U.S.C. 101 because the claimed invention

is directed to non-statutory subject matter. The claims are mixing statutory classes.

See also discussion under 112, second paragraph.

Dependent claims are further rejected based on the same rationale as the claims

from which they depend.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the

art to which it pertains, or with which it is most nearly connected, to make and use the same and shall
set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-24 are rejected under 35 U.S.C. 112, first paragraph, as failing to

comply with the written description requirement. The claim(s) contains subject matter

which was not described in the specification in such a way as to reasonably convey to

one skilled in the relevant art that the inventor(s), at the time the application was filed,

had possession of the claimed invention.

Re Claims 1,9 and 17:

The claimed invention recites:

selecting a relevant bidding model specifying bidding behavior as a function of
information held privately by a bidder and said characteristics of said market;

Applicants specification recites:

A bidding model specifies a bidding behavior pattern. It is a function of
auction characteristics or procedure of the corresponding auction. It is also
a function of the market structure of the auction. (Applicant's Specification, pg. 18, line
20+ - col. 19, line 1)

Which identifies the required elements used for selecting the bidding model?

Dependent claims are also rejected based on the same rationale as the claims

from which they depend.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly
claiming the subject matter which the applicant regards as his invention.

Claims 1-24 are rejected under 35 U.S.C. 112, second paragraph, as being

indefinite for failing to particularly point out and distinctly claim the subject matter which

applicant regards as the invention.

Re Claims 1,9 and 17: The meaning of characteristics of said market is indefinite. What are the characteristics of the market? E.g., Could just saying the market is an auction be sufficient. If it is something more, what is it?

Re Claims 1,9 and 17: The meaning of bidding model is indefinite. What is the bidding model? What elements are required to select it?

Re Claims 1,9 and 17: The meaning of estimated structure is indefinite. What is the estimated structure? How is it selected? How does the estimated structure tie in with the other claim limitations? E.g., The specification says that a collection of variables are required to estimate the structure of the market however this is never addressed in the claims.

> "Market structure" is intended to mean a collection of variables that describe the factors that may affect the bidding behavior of bidders. A market structure is characterized by two sets of variables: a first set of variables collectively describes the auction "environment," and a second set of variables collectively describes the auction "mechanism." (Applicant's Specification, pg. 25, lines 5-10)

Re 1,9 and 17: The meaning of bidding behavior is indefinite. How can specifying bidding behavior be a requirement of the bidding model (as claimed)? Yet , the bidding model is used to predict bidding behavior (as claimed)? Which comes first? Also, are specified and predicted bidding behaviors different in some way?

Re 1,9 and 17: What are the outcomes to be expected? How are they used to make a determination? Are they evaluated from a bidder or seller perspective? E.g., Are you looking for the highest or lowest price? Once you have this information, how do you know what is preferred?

The term "relevant bidding model" in claims 1,9 and 17 is a relative term which renders the claim indefinite. The term "relevant" is not defined by the claim, the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention.

In summation, claims 1,9 and 17 indefinite because: a) The scope of the claims are unclear. Terms such as "structure", "characteristics of said market" are broad, abstract concepts. b) There is insufficient correlation or interrelationship among the steps. c) There is no requirement of the claim to produce a result (i.e., the claim has not outputted a result). d) The evaluating step is unclear. How does the evaluating occur (i.e., evaluating mean, variance etc.)? e) The claims recite the limitation "relevant bidding model" it is unclear what is meant by relevant.

Re Claims 9-16: The claim is indefinite because the preamble recites a system claim however, the following limitation would imply that the system performing method steps. The suggested language would indicate that it is programmed to do those things.

Claim 9 recites:

a processor interconnected with said bus, wherein said processor executes a method for determining an auction format for a market, said method comprising the steps of:

Suggested language:

a processor interconnected with said bus, wherein said processor is programmed to execute a method for determining an auction format for a market, said method comprising the steps of:

As to dependent claims 10-16, they are drawn to system claims but, they recite

method steps. What structural components are used?

Re Claims 17-24: The preamble is indefinite because it appears to be mixing

statutory classes.

Claim 17 recites:

A computer readable medium for causing a computer system to execute the
steps in a method for determining a auction format for a market, said method
comprising the steps of:

A variation on the following language is suggested:

A computer readable medium having computer readable program code for
determining a auction format for a market, the computer executable code
performing steps comprising:

A computer-readable medium having computer-executable instructions for
determining a auction format for a market, the computer-executable instructions
performing steps comprising:

As to dependent claims 18-24, are you claiming the computer readable medium

or the method?

Re Claims 2, 10 and 18: The claim recites the limitation "first user input." Who

is the user (i.e., bidder, seller)? Does it matter?

The claim recites the limitation "auction characteristics data." How is this

different than the characteristics of said market?

The term "similar items" in claim 2 is a relative term which renders the claim

indefinite. The term "similar" is not defined by the claim, the specification does not

provide a standard for ascertaining the requisite degree, and one of ordinary skill in the

art would not be reasonably apprised of the scope of the invention.

Re Claims 3,11 and 19: The claim recites the limitation "auction characteristics data." How is this different than the characteristics of said market?

Re Claims 4,12 and 20: The claim recites the limitation "unobservable variables." What is this? Variables of what?

The claim recites the limitation "observable bids." What is this? Are these related to the historical bids or are they something different?

The claim recites the limitation "estimated latent structure of said market" What is this? How is it estimated? How is it different than the estimated structure?

Should "said bid model" be -- said bidding model --?

Re Claims 5,13 and 21: The claim recites "wherein said bidding model has embedded an unknown structure, and wherein said predicting a bidding behavior step comprises the steps of:" Is the bidding model a function of the unknown structure also? Are you referring to both the predicting a first bidding behavior step and the predicting a second bidding behavior step? How is the unknown structure different than the estimated latent structure and the estimated structure?

Re Claims 6,14 and 22: The claim recites the limitation "second user input." Who is the user (i.e., bidder, seller)? Does it matter?

The claim recites the limitation "an evaluation criterion." What is this?

The claim recites the limitation "constraint." What is this?

The claim recites the limitations "predicting a first outcome of said market step", "said estimated structure", "said bidding behavior", "said first predicted outcome." Are you referring to both the predicting a first outcome step and the predicting a second

outcome step? Are you referring to both the first bidding behavior and the second

bidding behavior? Are you referring to both the first estimated structure and the second

estimated structure? Are you referring to both the first outcome and second outcome?

Re Claims 7,15 and 23: The claim recites the limitation "third user input." Who

is the user (i.e., bidder, seller)? Does it matter?

The claim recites the limitation "evaluating said first outcome of said market

step", Are you referring to evaluating a first outcome and evaluating at least a second

second outcome?

The claim recites the limitation "descriptive statistics." What is this? How is it

descriptive?

Should "said plurality" be -- said plurality of candidate auction formats --?

Re Claims 8,16 and 24: The claim recites the limitation "evaluating said first

outcome of said market step", Are you referring to evaluating a first outcome and

evaluating at least a second outcome? The claim recites the limitation "highest

ranking." What is this? How is it descriptive?

Claim 8,16 and 24 recite the limitation "the highest said ranking". There is

insufficient antecedent basis for this limitation in the claim. Is this ranking with the

highest calculated mean?

Should "said plurality" be -- said plurality of candidate auction formats --?

Dependent claims are further rejected based on the same rationale as the claims

from which they depend.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all

obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148

USPQ 459 (1966), that are applied for establishing a background for determining

obviousness under 35 U.S.C. 103(a) are summarized as follows:

1.   Determining the scope and contents of the prior art.
2.   Ascertaining the differences between the prior art and the claims at issue.
3.   Resolving the level of ordinary skill in the pertinent art.
4.   Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1,3,4,6,7,8,9,11,12,14,15,16,17,19,20,22,23 and 24 are rejected under

35 U.S.C. 103(a) as being unpatentable over Seymour, US Pat. No. 6,871,190.

Re Claim 1: Seymour discloses a method for determining an auction format for a

market, said method comprising the steps of:

selecting characteristics of said market (See Seymour, Col. 5, lines 31-36);

selecting a relevant bidding model specifying bidding behavior that utilizes information

held privately by a bidder and said characteristics of said market (See Seymour, Col. 4,

lines 49-51, "A series of bidding and selling strategies are then generated for each type

of auction type"; col. 4, line 30+ - col. 5, line 15; col. 6, lines 1-12; col. 6, lines 1-12; col.

3, lines 3-51; col. 4, lines 49-51; col. 6, line 56 - col. 7, line 13);

selecting at least a first and a second estimated structure of said market (See Seymour,

Col.4, lines 30-49 and Col. 5, lines 11-15);

predicting a first bidding behavior utilizing said first estimated structure of said market,

said characteristics of said market and said relevant bidding model (See Seymour, Col.

5, lines 7-15, The recommendations to the seller and/or bidder regarding how to bid

and/or sell is based on a prediction of the bidding behavior of the various bidders);

predicting a first outcome of said market based on said first bidding behavior (See

Seymour, Col. 6, lines 56-59, "The input data is transmitted to the processing unit of the

seller site terminal and the optimum type of auction for sale of such merchandise is

determined (e.g., Sealed bid, Vickery, English or Dutch)." In order to determine the

optimum auction format the data regarding the auction including the seller, bidders and

merchandise is used to evaluate and compare what the predicted outcome would be for

each auction format (e.g. Sealed bid, Vickery, English or Dutch);

predicting at least a second bidding behavior utilizing at least said second estimated

structure of said market, said characteristics of said market and said relevant bidding

model (See Seymour, Col. 5, lines 7-15, The recommendations to the seller and/or

bidder regarding how to bid and/or sell is based on a prediction of the bidding behavior

of the various bidders);

predicting a second outcome of said market based on at least said second bidding

behavior (See Seymour, Col. 6, lines 56-59, "The input data is transmitted to the

processing unit of the seller site terminal and the optimum type of auction for sale of

such merchandise is determined (e.g., Sealed bid, Vickery, English or Dutch)." In order

to determine the optimum auction format the data regarding the auction including the

seller, bidders and merchandise is used to evaluate and compare what the predicted

outcome would be for each auction format (e.g. Sealed bid, Vickery, English or Dutch);

and evaluating said first outcome of said market and at least said second outcome of

said market to determine an auction format for said market (See Seymour, Col. 6, lines

56-59, "The input data is transmitted to the processing unit of the seller site terminal and

the optimum type of auction for sale of such merchandise is determined (e.g., Sealed

bid, Vickery, English or Dutch)." In order to determine the optimum auction format the

data regarding the auction including the seller, bidders and merchandise is used to

evaluate and compare what the predicted outcome would be for each auction format

(e.g. Sealed bid, Vickery, English or Dutch).

Intended Use: The limitation stating that the evaluating step is , "to determine an

auction format for said market" is a statement of intended use. Thus, "to determine an

auction format for said market" has not been given patentable weight.

Seymour fails to explicitly disclose selecting a relevant bidding model specifying

bidding behavior as a function of information held privately by a bidder and said

characteristics of said market (See Seymour, Col. 4, lines 49-51, "A series of bidding

and selling strategies are then generated for each type of auction type"; col. 4, line 30+ -

col. 5, line 15; col. 6, lines 1-12; col. 6, lines 1-12; col. 3, lines 3-51; col. 4, lines 49-51;

col. 6, line 56 - col. 7, line 13);

Official Notice is taken that it is old and well-known that information held by a

buyer (e.g., amount they are willing to pay, risk tolerance etc.) coupled with their

understanding of existing market conditions (e.g., rules, demand etc.) influences

behavior. For example, investment decisions, auctions, purchasing decisions.

It would have been obvious to one of ordinary skill in the art at the time the

invention was made to modify the teachings of Seymour to provide a method further

comprising: selecting a relevant bidding model specifying bidding behavior as a

function of information held privately by a bidder and said characteristics of said market.

One would have been motivated to make the method adaptable to changing

auction environments.

Re Claim 9: Seymour discloses a computer system comprising (See Seymour, Figs. 2

and 3, Inherently the computer system of Seymour comprises a bus, memory

interconnected to said bus and a processor interconnected with said bus. Figs. 2 and 3

provide a graphical illustration of how the system works):

a bus (See Seymour, Figs. 2 and 3);

a memory interconnected with said bus (See Seymour, Figs. 2 and 3); and

a processor interconnected with said bus, wherein said processor executes a method

for determining an auction format for a market (See Seymour, Figs. 2 and 3), said

method comprising the steps of:

selecting characteristics of said market (See Seymour, Col. 5, lines 31-36);

selecting a relevant bidding model specifying bidding behavior utilizing information held

privately by a bidder and said characteristics of said market (See Seymour, Col. 4, lines

49-51, "A series of bidding and selling strategies are then generated for each type of

auction type"; col. 4, line 30+ - col. 5, line 15; col. 6, lines 1-12; col. 6, lines 1-12; col. 3, lines 3-51; col. 4, lines 49-51; col. 6, line 56 - col. 7, line 13);

selecting at least a first and a second estimated structure of said market (See Seymour, Col.4, lines 30-49 and Col. 5, lines 11-15);

predicting a first bidding behavior utilizing said first estimated structure of said market, said characteristics of said market and said relevant bidding model (See Seymour, Col. 5, lines 7-15, The recommendations to the seller and/or bidder regarding how to bid and/or sell is based on a prediction of the bidding behavior of the various bidders);

predicting a first outcome of said market based on said first bidding behavior (See Seymour, Col. 6, lines 56-59, "The input data is transmitted to the processing unit of the seller site terminal and the optimum type of auction for sale of such merchandise is determined (e.g., Sealed bid, Vickery, English or Dutch)." In order to determine the optimum auction format the data regarding the auction including the seller, bidders and merchandise is used to evaluate and compare what the predicted outcome would be for each auction format (e.g. Sealed bid, Vickery, English or Dutch);

predicting at least a second bidding behavior utilizing at least said second estimated structure of said market, said characteristics of said market and said relevant bidding model (See Seymour, Col. 5, lines 7-15, The recommendations to the seller and/or bidder regarding how to bid and/or sell is based on a prediction of the bidding behavior of the various bidders);

predicting a second outcome of said market based on at least said second bidding

behavior (See Seymour, Col. 6, lines 56-59, "The input data is transmitted to the

processing unit of the seller site terminal and the optimum type of auction for sale of

such merchandise is determined (e.g., Sealed bid, Vickery, English or Dutch)." In order

to determine the optimum auction format the data regarding the auction including the

seller, bidders and merchandise is used to evaluate and compare what the predicted

outcome would be for each auction format (e.g. Sealed bid, Vickery, English or Dutch);

and

evaluating said first outcome of said market and at least said second outcome of said

market to determine an auction format for said market (See Seymour, Col. 6, lines 56-

59, "The input data is transmitted to the processing unit of the seller site terminal and

the optimum type of auction for sale of such merchandise is determined (e.g., Sealed

bid, Vickery, English or Dutch)." In order to determine the optimum auction format the

data regarding the auction including the seller, bidders and merchandise is used to

evaluate and compare what the predicted outcome would be for each auction format

(e.g. Sealed bid, Vickery, English or Dutch).

Intended Use: The limitation stating that the evaluating step is , "to determine an

auction format for said market" is a statement of intended use. Thus, "to determine an

auction format for said market" has not been given patentable weight.

        Seymour fails to explicitly disclose a system further comprising selecting a

relevant bidding model specifying bidding behavior as a function of information held

privately by a bidder and said characteristics of said market (See Seymour, Col. 4, lines

49-51, "A series of bidding and selling strategies are then generated for each type of

auction type"; col. 4, line 30+ - col. 5, line 15; col. 6, lines 1-12; col. 6, lines 1-12; col. 3,

lines 3-51; col. 4, lines 49-51; col. 6, line 56 - col. 7, line 13);

Official Notice is taken that it is old and well-known that information held by a

buyer (e.g., amount they are willing to pay, risk tolerance etc.) coupled with their

understanding of existing market conditions (e.g., rules, demand etc.) influences

behavior. For example, investment decisions, auctions, purchasing decisions.

It would have been obvious to one of ordinary skill in the art at the time the

invention was made to modify the teachings of Seymour to provide a system further

comprising selecting a relevant bidding model specifying bidding behavior as a function

of information held privately by a bidder and said characteristics of said market.

One would have been motivated to make the method adaptable to changing

auction environments.

Re Claim 17: A computer readable medium for causing a computer system to execute

the steps in a method for determining a auction format for a market, said method

comprising the steps of:

selecting characteristics of said market (See Seymour, Col. 5, lines 31-36);

selecting a relevant bidding model specifying bidding behavior as a function of

information held privately by a bidder and said characteristics of said market (See

Seymour, Col. 4, lines 49-51, "A series of bidding and selling strategies are then

generated for each type of auction type"; col. 4, line 30+ - col. 5, line 15; col. 6, lines 1-

12; col. 6, lines 1-12; col. 3, lines 3-51; col. 4, lines 49-51; col. 6, line 56 - col. 7, line

13);

selecting at least a first and a second estimated estimating structure of said market

(See Seymour, Col.4, lines 30-49 and Col. 5, lines 11-15);

predicting a first bidding behavior utilizing said first estimated structure of said market,

said characteristics of said market and said relevant bidding model (See Seymour, Col.

5, lines 7-15, The recommendations to the seller and/or bidder regarding how to bid

and/or sell is based on a prediction of the bidding behavior of the various bidders);

predicting a first outcome of said market based on said first bidding behavior (See

Seymour, Col. 6, lines 56-59, "The input data is transmitted to the processing unit of the

seller site terminal and the optimum type of auction for sale of such merchandise is

determined (e.g., Sealed bid, Vickery, English or Dutch)." In order to determine the

optimum auction format the data regarding the auction including the seller, bidders and

merchandise is used to evaluate and compare what the predicted outcome would be for

each auction format (e.g. Sealed bid, Vickery, English or Dutch);

predicting at least a second bidding behavior utilizing at least said second

estimated structure of said market, said characteristics of said market and said relevant

bidding model (See Seymour, Col. 5, lines 7-15, The recommendations to the seller

and/or bidder regarding how to bid and/or sell is based on a prediction of the bidding

behavior of the various bidders);

predicting a second outcome of said market based on at least said second bidding

behavior (See Seymour, Col. 6, lines 56-59, "The input data is transmitted to the

processing unit of the seller site terminal and the optimum type of auction for sale of

such merchandise is determined (e.g., Sealed bid, Vickery, English or Dutch)." In order

to determine the optimum auction format the data regarding the auction including the

seller, bidders and merchandise is used to evaluate and compare what the predicted

outcome would be for each auction format (e.g. Sealed bid, Vickery, English or Dutch);

and

evaluating said first outcome of said market and at least said second outcome of said

market to determine an auction format for said market (See Seymour, Col. 6, lines 56-

59, "The input data is transmitted to the processing unit of the seller site terminal and

the optimum type of auction for sale of such merchandise is determined (e.g., Sealed

bid, Vickery, English or Dutch)." In order to determine the optimum auction format the

data regarding the auction including the seller, bidders and merchandise is used to

evaluate and compare what the predicted outcome would be for each auction format

(e.g. Sealed bid, Vickery, English or Dutch).

Intended Use: The limitation stating that the evaluating step is , "to determine an

auction format for said market" is a statement of intended use. Thus, "to determine an

auction format for said market" has not been given patentable weight.

Seymour fails to explicitly disclose a computer readable medium further

comprising: selecting a relevant bidding model specifying bidding behavior as a

function of information held privately by a bidder and said characteristics of said market.

Official Notice is taken that it is old and well-known that information held by a

buyer (e.g., amount they are willing to pay, risk tolerance etc.) coupled with their

understanding of existing market conditions (e.g., rules, demand etc.) influences

behavior. For example, investment decisions, auctions, purchasing decisions.

It would have been obvious to one of ordinary skill in the art at the time the

invention was made a computer readable medium further comprising: selecting a

relevant bidding model specifying bidding behavior as a function of information held

privately by a bidder and said characteristics of said market.

One would have been motivated to make the method adaptable to changing

auction environments.

Re Claims 3,11 and 19: Seymour further discloses the

method/system/computer readable medium, wherein said selecting a relevant bidding

model step comprises the steps of:

receiving said auction characteristics data(See Seymour, Col. 5, lines 29-36);

accessing a database (See Seymour, Col. 5, lines 21-25, The patent discusses

data gathering exercises. A database is being accessed to retrieve the data);

retrieving from said database a relevant bidding model (See Seymour, Col. 4,

lines 49-51, "A series of bidding and selling strategies are then generated for each type

of auction type"), wherein said bidding model is selected based on a corresponding

relevance of said auction characteristics data (See Seymour, Col. 5, lines11-15, Input

data is processed and used to determine the optimum values for the reserve bid price

and for the starting bid price); and

outputting said relevant bidding model (See Seymour, Col. 6, lines 56-65, The

optimum values for the reserve bid price and for the starting bid price are displayed for

the seller).

Re Claims 4,12 and 20: Seymour further discloses the

method/system/computer readable medium, wherein said estimating a structure of said

market step comprises the steps of:

receiving said relevant bidding model (See Seymour, Col. 4, lines 49-51, "A series of

bidding and selling strategies are then generated for each type of auction type");

receiving said bids data (See Seymour, Col. 5, lines 21-25, The patent discusses data

gathering exercises and it can be inferred that a data base is accessed to retrieve the

data).

Seymour fails to explicitly disclose a method wherein said estimating a structure

of said market step comprises the steps of: expressing unobservable variables in terms

of observable bids, wherein said unobservable variables are expressed in terms of

observable bids by inverting said bid model; transforming said bids data to a sample of

inverted bids,wherein said bids data are transformed by inverting said bid model;

estimating an estimated latent structure of said market, wherein said sample of inverted

bids receives application of statistical density estimation techniques to obtain said

estimated structure; and outputting said estimated structure. Official Notice is taken

however, that: to express unobservable variables in terms of observable variables; to

create a sample of the data; to use the sample to generate a statistical distribution of

the sample data; to make estimates or assumptions about the market; and to report

upon or generate an output of the results is old and well-known. It is common practice

in fields such as mathematics, statistics and economics to use these methodologies for

the purpose of using historical data, reasonable assumptions, etc.to make predictions or

estimations about the future (e.g., economic predictions, research studies). Thus, it

would have been obvious to one of ordinary skill in the art to modify the teachings of

Seymour in light of the Official Notice for the purpose of estimating the structure of said

market based on the historical data on record.

Re Claims 6,14 and 22: Seymour further discloses the

method/system/computer readable medium, wherein said predicting a first outcome of

said market step comprises the steps of:

receiving a second user input, wherein said second user input comprises the

step of (See Seymour, Col. 6, lines 56-59): an evaluation criterion (See Seymour, Col.

4, line 67, Col. 1-2, Col. 6, lines 56-59, From the language of the patent the evaluation

criteria used to determined the optimum type of auction is based on an evaluation of the

profit generated or loss incurred); a candidate auction format (See Seymour,Col. 6,

lines 56-59); and a constraint (See Seymour,Col. 6, lines 56-59, The mention of

"strategy parameters" is interpreted to mean that there are constraints placed);

receiving said estimated structure (See Seymour, Col.4, lines 30-49 and Col. 5,

lines 11-15);

receiving said bidding behavior prediction for said candidate auction format,

wherein said bidding behavior prediction further comprises a prediction under said

constraint (See Seymour, Col. 5, lines 7-15, The recommendations to the seller and/or

bidder regarding how to bid and/or sell is based on a prediction of the bidding behavior

of the various bidders);

obtaining a value of said evaluation criterion, wherein said value is based on said

estimated structure, said bidding behavior prediction, said candidate auction format, and

said constraint, said value comprising said first predicted outcome (Seymour, Col. 4,

line 67; Col.5, lines 1-2 and 11-15; Col. 6, lines 56-59, There must be a value for the

evaluation criterion (e.g., profit generated or loss incurred) in order to compare the

different selling strategies. Further, this value is able to change depending on specific

data inputs which influence the estimated structure, bidding behavior prediction,

candidate auction format and said constraint); and

outputting said value ((Seymour, Col. 6, lines 63-67, discussion of a display

screen and customer confirmation).

Re Claims 7,15 and 23: Seymour further discloses the

method/system/computer readable medium, wherein said evaluating said first outcome

of said market step comprises the steps of:

receiving a third user input, wherein said third user input comprises a plurality of

candidate auction formats (See Seymour, Col. 6, lines 56-59);

Seymour fails to disclose a method wherein said evaluating said first outcome of

said market step comprises the steps of: receiving a predicted outcome for each said

candidate auction format; calculating descriptive statistics for each said candidate

auction format, wherein said descriptive statistics comprise a mean and a variance;

ranking each said candidate auction format with respect to said calculated mean and

generating corresponding rankings for said plurality; and outputting said descriptive

statistics and said rankings. Official Notice is taken that receiving a predicted outcome

for different scenarios; calculating statistics for each scenario (e.g., mean, variance);

ranking scenarios in ascending or descending order in regards to which is the best

option; and reporting upon or generating an output of the results is old and well known.

It is common practice is fields such as mathematics, statistics and economics to use

these methodologies for the purpose of comparison and decision-making (e.g., product

purchase decisions; evaluating business opportunities etc.). Thus, it would have been

obvious to one of ordinary skill in the art to modify the teachings of Seymour in view of

the Official Notice for the purpose of evaluating an auction format, comparing different

auction formats and ultimately making a decision about the optimal auction format.

Re Claims 8,16 and 24:   Seymour further discloses a method/system/computer

readable medium, wherein said evaluating said first outcome of said market step

comprises the steps of:

selecting a best auction format, wherein said best auction format comprises the

candidate auction format within said plurality having the highest said ranking (See

Seymour, Col. 6, lines 56-59); and

outputting said best auction format (See Seymour, Col. 6, lines 56-59 and Col. 6,

lines 63-65. The optimum auction format is determined and displayed on the screen for

the seller).

Thus, it would have been obvious to one of ordinary skill in the art to modify the

teachings of Seymour in view of the Official Notice for the purpose of evaluating an

auction format, comparing different auction formats and ultimately making a decision

about the optimal auction format.

Claims 2,5,10,13,18 and 21 are rejected under 35 U.S.C. 103(a) as being

unpatentable over Seymour, U.S. Patent No. 6,871,190 in view of Shoham, U.S. Patent

No. 6,285,989.

Re Claims 2,10 and 18: Seymour further discloses the

method/system/computer readable medium as recited in Claim 1, wherein said selecting

characteristics of said market step comprises the steps of:

receiving a first user input, wherein said first user input comprises information

identifying an item to be auctioned (See Seymour, Col. 6, lines 42-50);

accessing a database (See Seymour, Col. 5, lines 21-25, The patent discusses

data gathering exercises. A database is being accessed to retrieve the data); and

retrieving from said database auction characteristics data (See Seymour, Col. 5,

lines 29-36),

Seymour fails to explicitly disclose wherein said selecting characteristics of said

market step comprises the steps of: retrieving from said database historical bids data;

wherein said auction characteristics comprise information relating to historical auctions

of similar items; and outputting said auction characteristics data.

Shoham discloses wherein said selecting characteristics of said market step

comprises the steps of:

retrieving from said database historical bids data (See Shoham, Col.14, lines 25-32, There is a discussion regarding the retrieval of statistics and results of auctions; and time stamps for the events record of historical data);

retrieving from said database auction characteristics data, wherein said auction •characteristics comprise information relating to historical auctions of similar items (See Shoham, Col. 14, lines 25-32);

outputting said bids data (See Shoham, Col. 14, lines 25-32); and

outputting said auction characteristics data. (See Shoham, Col. 14, lines 25-32).

It would have been obvious to one of ordinary skill in the art to modify the teachings of Seymour to include the teachings of Shoham. As Shoham suggests retrieving data (e.g., historical bids data, auction characteristics data) and outputting data (e.g., bids data, auction characteristics data) is necessary for analysis, auditing and publication. Also, as Shoham suggests the ability to retrieve and output data is beneficial when modifying the software to provide relevant auction formats in different situations. The motivation would have been to continuously improve and adapt the software.

Re Claims 5,13 and 21: Seymour further discloses the method/system/computer readable medium, wherein said predicting a bidding behavior step comprises the step of:

outputting a prediction of bidding behavior (See Seymour, Col. 5, lines 7-15, The patent is interpreted broadly. The recommendations to the seller and/or bidder

regarding how to bid and/or sell is based on a prediction of the bidding behavior of the various bidders).

Seymour fails to explicitly disclose wherein said bidding model has embedded an unknown structure; wherein said predicting a bidding behavior step comprises the steps of: receiving said estimated structure; receiving said relevant bidding model; and substituting said estimated structure for said unknown structure.

Shoham discloses wherein said bidding model has embedded an unknown structure (See Shoham, Col. 13, lines 48-50, The factors (e.g., rules, constraints) associated with each bidding model allow the specific structure of the market to be changed or augmented. The estimated structure applied generally to each bidding model can be adapted to the unknown structure of a particular auction); and

wherein said predicting a bidding behavior step comprises the steps of:

receiving said estimated structure (See Shoham, Col. 13, lines 1-6 and lines 32-45 and 38-42. Shoham is interpreted as disclosing that bidding models differ in terms of both the services; and the market and system conditions required. Factors (e.g., rules,constraints) such as minimum bids, bidding increments, length of rounds are relevant in creating an appropriate structure for the different bidding models). Thus, for each estimated structure received there is relevant bidding model that is also received);

receiving said relevant bidding model (See Shoham, Col. 13, lines 1-6 and lines 32-45 and 38-42. Shoham is interpreted as disclosing that bidding models differ in terms of both the services; and the market and system conditions required. Factors (e.g., rules,constraints) such as minimum bids, bidding increments, length of rounds are

relevant in creating an appropriate structure for the different bidding models). Thus, for

each estimated structure received there is relevant bidding model that is also received);

and substituting said estimated structure for said unknown structure (See

Shoham, Col. 13, lines 48-50, The factors (e.g., rules, constraints) associated with each

bidding model allow the specific structure of the market to be changed or augmented.

The estimated structure applied generally to each bidding model can be adapted to the

unknown structure of a particular auction).

It would have been obvious to one of ordinary skill in the art to modify the

teachings of Seymour to include the teaching of Shoham because Shoham teaches a

specific way to implement the predicting a bidding behavior step already introduced in

Seymour. The motivation would have been to provide sellers and bidders with

predictions regarding the bids likely to occur so as to aid their selection of the type of

auction format to engage in different market situations.

Response to Arguments

Applicant's arguments have been fully considered but they are not persuasive.

103

Applicant's arguments filed 11/27/06 have been fully considered but they are not

persuasive. As best the newly added limitations are understood, the reference still

reads on it.

Applicant argues, Seymour fails to disclose or teaches away from

selecting a relevant bidding model specifying bidding behavior as a function of

information held privately by a bidder and said characteristics of said market;

Although not explicitly stated, the bidding strategy in Seymour (i.e., bidding

model) makes selecting a bidding behavior as a function of information held privately by

a bidder and said characteristics of said market obvious.

Seymour discloses a bidding model (Seymour, Col. 4, lines 49-51).

In applicant's disclosure the relevance of information, particularly private

information, is discussed at various times (See Disclosure, pg. 13, lines 20- pg. 14, line

4; pg. 16, lines 19+ -pg. 17, line 10; pg. 24, lines 18+ - pg. 23, line 3). On, pg. 20 of the

disclosure applicant discloses that consideration is made for the distribution of bidders'

private information in the decision-making regarding the auctions. Seymour, similarly

considers the distribution of bidders' private information by estimating the minimum,

maximum value and valuation range bidders' will likely place on the auctioned items

(Seymour, col. 4, line 30+ - col. 5, line 15). On pg.24 of the disclosure applicant

provides, as an example of private information, a bidder's willingness to pay for the

auction items. Seymour describes a bidding strategy for a bidder that requires data

input from the bidder (Seymour, col. 4, lines 1-10). Seymour goes on to describe how

the data input includes the price the bidder is willing to pay (Seymour, col. 6, lines 1-12);

Applicant's disclosure discusses the characteristics of the market (See

Disclosure, pg. 24, lines 12-16; pg. 25, lines 11-15; pg. 26, lines 17-20). The market is

described as comprising two components: market environment (e.g., characteristics of

auctioned item see pg..25 of Disclosure) and characteristics of the market mechanism

(e.g., English, Dutch, Vickrey etc. pg. 26 of Disclosure). Seymour also provides for

characteristics of the auctioned item (Seymour, pg. 6, lines 1-12) and the auction

mechanism (Seymour, col. 3, lines 3-51; col. 4, lines 49-51; col. 6, line 56 - col. 7, line

13).

Although the private information and characteristics of the market are not

explicitly discussed as being a function of the bidding behavior. It is old and well-known

that information held by a buyer (e.g., amount they are willing to pay, risk tolerance etc.)

coupled with their understanding of existing market conditions (e.g., rules, demand etc.)

influences behavior. For example, investment decisions, auctions, purchasing

decisions.

Thus, Seymour makes obvious a bidding model (i.e., bidding strategy) specifying

bidding behavior as a function of information held privately by a bidder and said

characteristics of said market.

Applicant argues, Seymour fails to disclose predicting a bidding behavior;

The claimed invention is not limited to predicting the behavior of an individual

bidder as suggested in pg. 19 of applicant's arguments (6/16/06). The claimed

invention states "predicting a bidding behavior" which is broad enough to cover the

bidding behavior of all the various bidders. The recommendations to the seller and/or

bidder regarding how to bid and/or sell is based on a prediction of the bidding behavior

of the various bidders.

Applicant argues, Seymour fails to disclose predicting a first outcome of said market;

and evaluating said first outcome of said market.

Applicant's disclosure describes the interrelationship between the bidding

behavior, auction format and outcome (See Disclosure, pg. 15, lines 5-17). Similarly, in

order to determine the optimum auction format the data regarding the auction including

the seller, bidders and merchandise is used to evaluate and compare what the

predicted outcome would be for each auction format (e.g. Sealed bid, Vickery, English

or Dutch) (Seymour, Col. 6, lines 56-59).

Applicant argues, the prior art teaches away.

[A] reference will teach away if it suggests that the line of development flowing

from the reference's disclosures is unlikely to be productive of the result sought by the

applicant. In re Gurley, 31 USPQ2d 1130 (Fed. Cir. 1994).

Remarks

Applicant is encouraged to contact the Examiner and request an interview if·

further guidance is necessary to advance prosecution or address claim deficiencies.

Conclusion

The prior art made of record and not relied upon is considered pertinent to

applicant's disclosure. The following references relate to auctions.
